Daymap by Civica × CIVICA

Daymap Inventory

Stop asking "who has the projector?" Know where every school asset is, who has it, and when it's due back.

THE PROBLEM

Schools track thousands of laptops, lab kits and instruments with spreadsheets, paper sign-out sheets and memory, so items go missing and stock expires unnoticed.

WHAT WE BUILT

An inventory back end for Civica's Daymap platform: items and individual units, loans and returns, custom fields, tags, expiry tracking and search.

WHY IT MATTERS

Less time chasing equipment, fewer lost and expired items, and one trusted record of everything a school owns.

40

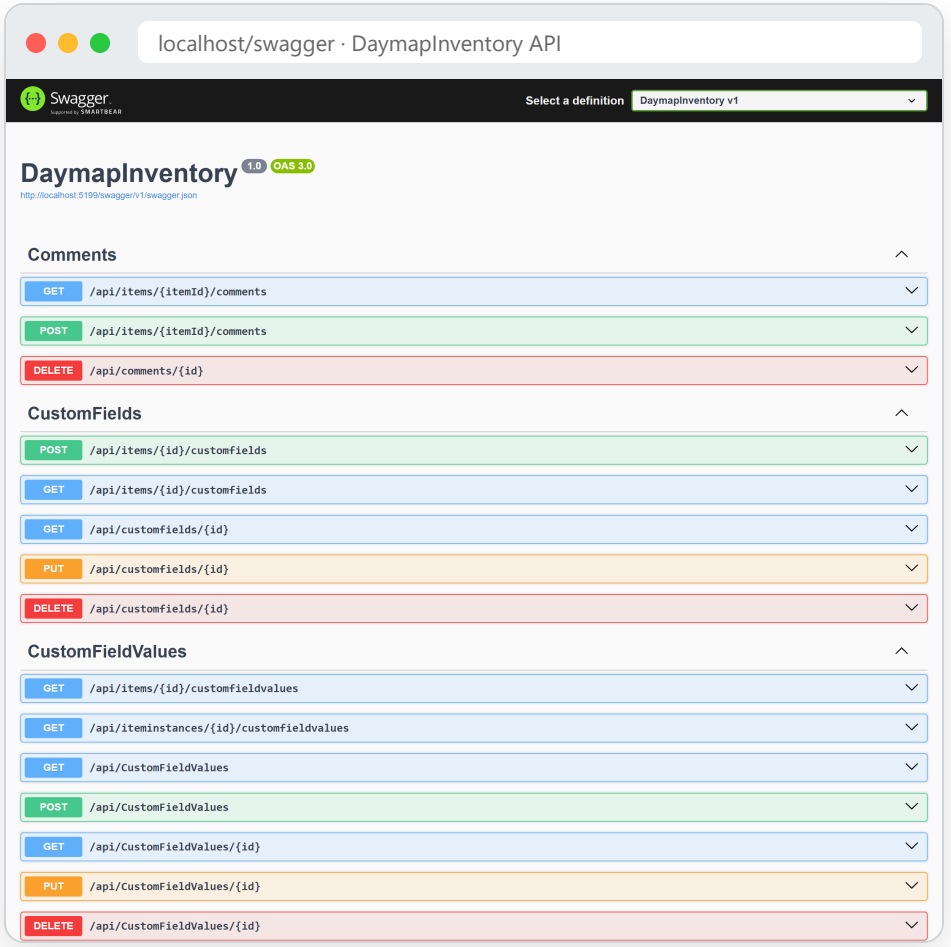

REST endpoints covering the full item lifecycle

105

passing unit tests across controllers and repositories

Any item

custom fields let a violin and an iPad each store what matters
