Daymap by Civica × CIVICA

Daymap Inventory

Every laptop, lab kit and loan, **tracked in one place**.
A school inventory system built for Civica's Daymap platform.

SWINBURNE UNIVERSITY OF TECHNOLOGY

01 THE PROBLEM

What are we addressing?

Schools manage thousands of shared assets with spreadsheets, paper sign-out sheets and memory.

Items go missing
No one knows who borrowed what.

No single view
Stock is spread across rooms and campuses.

Stock expires
First-aid kits and chemicals go out of date.

One size doesn't fit
A violin and an iPad need different details.

BEFORE

Spreadsheets · Paper · Memory → **"Who has the projector?"**

AFTER

Laptops & iPads
Lab & first aid
Music & sport
→ **Daymap Inventory** →
✓ Who has it
✓ When it's due
✓ What expires
✓ One record

02 THE PROCESS

How did we approach it?

S1 Foundations
Database design, models, first API

S2 Real data
SQL Server + item instances

S3 Custom fields
Schools define their own fields

S4 Loans & tags
Borrow, return, live stock

S5 Expiry & search
Expiry alerts, search, comments

S6 Hardening
Error handling, tests, Docker

How we worked: Agile Scrum · Jira · GitHub pull requests · Client sprint reviews · Unit testing

03 THE SOLUTION

What did we develop?

40 API endpoints
105 passing tests
13 data models
6 sprints delivered

Unit tracking
Every physical item, one by one

Loans & returns
Stock updates automatically

Custom fields
Each school adds its own

Tags & categories
Organise stock your way

Expiry alerts
Catch out-of-date stock

Search & history
Full transaction trail

How it fits together

Daymap → REST API → Data layer → SQL Server

ASP.NET Core · .NET 8 · EF Core · Docker

Our live API (Swagger)

GET	/api/Items/search
GET	/api/Items/expiring
GET	/api/Items/expired
GET	/api/Items/{id}
PUT	/api/Items/{id}

Search, expiring and expired items, live

Why it matters: less time chasing equipment, fewer lost and expired items, and one trusted record of everything a school owns.
